TAPESTRY

Tapestry provides utility and energy companies the ability to solve disconnected information issues that impact the safe and effective execution of work.

Changing regulations, new technologies, and increasing pressure to drive efficiencies dominate operational strategy. Managing all of these changes in a cost-effective and systematic way is imperative to business success.

Industry Challenge *Disconnects with consequences*

Maintaining up-to-date records and managing the relationships between sources of change and disconnected work documentation demands operational agility. However, managing change across functional areas and information systems has proven challenging for utility companies. Systems are disconnected and not set up to trigger alerts for enterprise-wide changes when they occur. Information tracking solutions often take the form of ad hoc spreadsheets, exceedingly complex custom implementations, or manual processes.

Tapestry Solution *Bringing it all together*

Mosaic Tapestry is a powerful mapping engine that consolidates existing procedures, standards, qualifications, training, and their sources of change around a single Cloud-based information management platform. Gaps can be located quickly and efficiently, and duplications of effort are minimized. Siloed business functions are aligned to identify, track, and manage change across information assets.
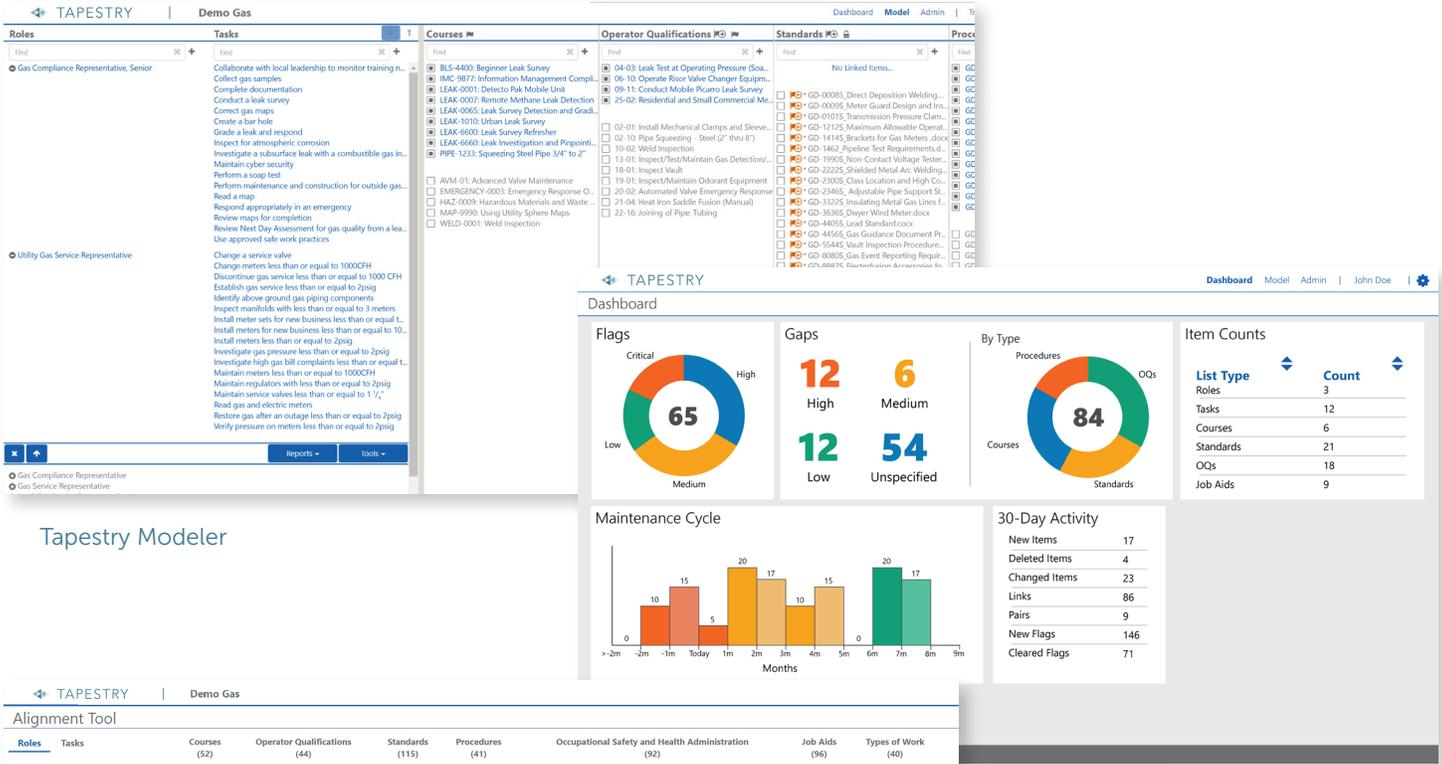

Workforce Improvement *Beyond information management*

Mosaic Tapestry not only provides the ability to manage and maintain information assets, but also to leverage those assets for workforce improvement. Tapestry serves as a platform for performance support, knowledge management, and self-service, delivering a holistic solution from the back office to the field.

TAPESTRY

Core Features

- Information Services Platform
- Flexible and Extensible Architecture
- Gap Analysis and Reporting Tools
- Productivity Tools for efficient management of change
- Performance Support Tools for field and administrative functions

Tapestry Modeler

Tapestry Dashboard

Tapestry Alignment Tool

Business Benefits

- Improved traceability across information assets
- Tighter alignment between disparate business units and work functions
- Increased value of current enterprise systems
- Enhanced understanding of change impacts and areas of risk in the information ecosystem
- Easy access to support information in the field and across administrative functions
